Answers

1. **C** - There are 3 tens and 8 ones, so the number is 38. Swapping the digits gives 83.
2. **D** - 10 more changes the tens digit from 3 to 4, so 38 becomes 48. Adding 1 gives 39, which is wrong.
3. **B** - 10 less changes the tens digit from 7 to 6, so 72 becomes 62. Taking 1 away gives 71, which is wrong.
4. **A** - The tens stay 3 and the ones are $4 + 5 = 9$, so the sum is 39. Adding 5 to the tens gives 84, a mistake.
5. **B** - 4 tens plus 3 tens is 7 tens, which is 70. The answer 7 forgets that these are tens.
6. **C** - $38 + 2 = 40$, then $40 + 3 = 43$. Stopping after the first hop and adding wrong gives 41.
7. **B** - 8 tens minus 3 tens is 5 tens, which is 50. Adding $80 + 30$ gives 110, a mistake.
8. **A** - One row up is 10 less, so 43 becomes 33. One row down gives 53.
9. **D** - 6 tens minus 4 tens is 2 tens, so ? is 40. Adding $60 + 20$ gives 80, a mistake.
10. **A** - $56 + 4$ makes the next ten: $56 + 4 = 60$. Taking away 4 gives 52.

Remember

Remember

- A two-digit number has tens and ones, like $34 = 3$ tens and 4 ones.
- To add ones, keep the tens and add the ones.
- If the ones pass 9, make the next ten first.
- 10 more or 10 less changes only the tens digit.
- To subtract tens, think of tens: 8 tens - 3 tens = 5 tens.
